#### **Data Loading and 3D Visualization**

#### Sonia Pujol, Ph.D., Harvard Medical School Director of Training, National Alliance for Medical Image Computing

# 3D Visualization of the Anatomy

Following this tutorial, you will be able to load and visualize volumes within Slicer4, and to interact in 3D with structural images and models of the anatomy.

Slicer is a freely available opensource platform for segmentation, registration and 3D visualization of medical imaging data.

3DSlicer is a multi-institutional effort supported by the National Institute of Health.

- An end-user application for image analysis
- An open-source environment for software development
- A software platform that is both easy to use for clinical researchers and easy to extend for programmers

3DSlicer version 4.1 is a multi-platform software running on Windows, Linux, and Mac OSX.

#### Disclaimer

It is the responsibility of the user of 3DSlicer to comply with both the terms of the license and with the applicable laws, regulations and rules. Slicer is a tool for research, and is not FDA approved.

 1997: Slicer started as a research project between the Surgical Planning Lab (Harvard) and the CSAIL (MIT)

Image Courtesy of the CSAIL, MIT

# 3DSlicer History

- 1997: Slicer started as a research project between the Surgical Planning Lab (Harvard) and the CSAIL (MIT)
- 2012: Multi-institution effort to share the latest advances in image analysis with clinicians and scientists

#### **Welcome to Slicer4**

Slicer4 contains more than 100 modules for image segmentation, registration and 3D visualization of medical imaging data

# PART 1: LOADING AN MR VOLUME

# The DICOM 3.0 File Format

Most radiological imaging equipment produce images in DICOM file format ('.dcm files')

Image001.dcm Image002.dcm Image003.dcm

# **Data Representation**

- The result of a volumetric acquisition is a 3D volume of data related to the patient.
- The 3D raster dataset is sampled on a discrete grid with elements called voxels which contain the signal intensity.

# **Tutorial Dataset**

- The tutorial dataset is an MR scan of the brain of a healthy subject.
- The data in the Nrrd file format, part of the NA-MIC open-source toolkit
- DICOM data can be converted in Nrrd using the module 'DICOM to NRRD Converter' in Slicer.

#### **Part 2:**

# 3D visualization of surface models of the brain

- A Slicer scene is a MRML file which contains a list of elements loaded into Slicer (volumes, models, fiducials...)
- The tutorial scene contains an MR scan of the brain and 3D surface models of anatomical structures.
- The tutorial data are part of the SPL-PNL Brain Atlas developed by Thalos et al.

# Loading the Slicer Scene

# **3D Surface Models**

- A 3D model is a surface reconstruction of an anatomical structure.
- The model is a triangular mesh that approximates a surface from a 3D label map.
- The scalar values for surface models are integers which correspond to the label that had been assigned in the segmentation process.
